1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on February 5, 2009 has been entered.

Page 2

- 2. Claims 18 and 19 are objected to because of the following informalities: In both claims 18 and 19, line 3 of each, "on outward-facing side" is ungrammatical. In claim 18, line 4, "on inward-facing side" is also ungrammatical. Appropriate correction is required.
- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claims 18 and 19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claims 18 and 19, line 2 of each, 'a metal or ceramic middle layer" is alternatively indefinite, rendering what the claimed invention comprises. The phrasing should be changed to --a middle layer of one of metal and ceramic--. Similarly, in lines 3-4 of each claim, "a sealing lacquer layer or a sealing polyolefin film" is also alternatively indefinite, and should be changed to --one of a sealing lacquer layer and a sealing polyolefin film--. Also in lines 3 and 5 of each claim,

the indefinite alternative phrasing "metal or ceramic" is unnecessary for clarity or consistency, and should be deleted.

In claim 19, lines 4-5, "the inward-facing metal or ceramic middle layer" lacks antecedent basis, and it appears it is the --inward-facing side of the middle layer-- that is intended.

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

6. Claims 1-2, 5, 10 and 14-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Counts et al. (5,341,930) in view of Kaufmann (5,389,415). Counts et al. disclose a packaging bag (Figures 1 and 2) with a front wall (14) and a rear wall (12) in which the front wall and rear wall are bonded together along a peripheral edge (column 6, lines 39-47), each of the front wall and the rear wall being continuous and uninterrupted so as to not have any hole therein, at least one of the front wall and rear wall bonded to a cover film (16) which is printed on one or both sides, substantially the entire area of the cover film being bonded to and peelable from the at least one of the front wall and rear wall, and at least one of the front wall and rear wall of the packaging bag printed on the outside of the bag (at 20). Counts et al. do not disclose a portion of the cover film permanently bonded to the packaging film. However, Kaufmann discloses

Art Unit: 3728

a substantial portion of a cover film (2) bonded to and peelable from a package and a remaining portion (5) of the cover film permanently bonded to a packaging bag in an edge area. It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the packaging bag of Counts et al. with the peelable and permanent seal combination teaching of Kaufmann as claimed, as such a modification would predictably permanently retain the cover film with the bag of Counts et al., yet allow its substantial peeling to ascertain text hidden beneath the cover film, as suggested by Kaufmann. "A combination of familiar elements according to known methods is likely to be obvious when it does no more than yield predictable results." *KSR Int 'I v. Teleflex Inc.*, 127 S.Ct. 1731, 82 USPQ2d at 1396.

As to claim 2, Counts et al. disclose a first packaging film (14), a second packaging film (12) and a cover film (16).

As to claim 5, Counts et al. also sets forth the process of manufacture as claimed.

As to claim 10, Counts et al. disclose bonding of the cover film in an edge area.

As to claim 14, Kaufmann further disclose employing permanent adhesive (see column 2, lines 43-55).

As to claim 15, since the prior art combination discloses printing in general, and applicant discloses register printing to be known in the field, to employ the commonly known register printing process would have been obvious to one of ordinary skill in the art and would fail to define any new and unexpected result by its employment.

Page 5

Art Unit: 3728

7. Claims 3 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over the art as applied to claim 1 above, and further in view of Muir Jr. et al. (6,767,604). Muir Jr. et al. disclose the front wall and the rear wall of a similar bag being of the same packaging film by folding (see column 3, lines 46-61). To provide the front and rear walls of Counts et al. as folded portions of the same material would have been obvious, as it is well-known in the bag field to provide a bag by folding a single sheet, as disclosed by Muir Jr. et al..

8. Claims 18 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over the art as applied to claims 16 and 17 above, and further in view of any one of Marbler et al. (6,726,363), Koch et al. (6,955,842) and Evans et al. (4,058,632). The previous combination does not disclose the particulars of the packaging film packaging film. However, disclose a packaging bag comprised of a packaging film composed of a middle layer (see column 2, line 22 through column 3, line 30; layer 2; layer III; respectively) of one of metal and ceramic, a plastic layer (see column 2, line 22 through column 3, line 30; layer 1; layer IV) on an outward-facing side of the middle layer and one (see column 2, line 22 through column 3, line 30; layer 3; layer IIB) of a sealing lacquer or sealing polyolefin film on an inward-facing side of the middle layer. It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide a packaging bag of the previous combination with a layer structure as claimed, as such a modification would predictably provide a packaging bag to advantageously hold a particular content in the manner suggested by any one of

Art Unit: 3728

Marbler et al., Koch et al. (6,955,842) and Evans et al.. "A combination of familiar elements according to known methods is likely to be obvious when it does no more than yield predictable results." *KSR Int 'I v. Teleflex Inc.*, 127 S.Ct. 1731, 82 USPQ2d at 1396. The laminate appears varied in applicants' disclosure, the particular selection based on particular content being within the level of ordinary skill in the art.

9. Applicant's arguments filed December 31, 2008 have been fully considered but they are not persuasive.

In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986).

Applicant maintains to believe that any modification of one reference with the teaching of another "destroys" the modified reference. This argument can be used for any construction, as employing applicant's rationale, any change in an existing structure "destroys" the existing structure. The examiner, nor the Patent Office, recognizes that any modification destroys a base reference by it merely being modified. Thinking in a common sense way, would replacing a container with an entirely removable closure on a container with a hinged or tethered closure "destroy" the container? Not in the examiner's vision, it would just change the capabilities of the container in an expected way. The modification of Counts et al. in view of Kaufman is also maintained to be

Page 7

obvious in order to obtain a non-removable cover. The examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988)and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, Kaufman discloses a printed cover film being reusably peelable from a bag and resecurable thereto, to render the packaging bag recoverable by the printed cover film, which is what is desired by applicant in his packaging bag.

The added claims to the particular laminate appear to be a conventional arrangement within the filed of providing laminated packages, and appropriate additional references have been added.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bryon P. Gehman whose telephone number is (571) 272-4555. The examiner can normally be reached on Tuesday through Thursday from 7:30am to 5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mickey Yu, can be reached on (571) 272-4562. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for
